SUMMARY

Software Engineer with two years delivering secure financial, government, and enterprise systems in **ASP.NET Core**, **Angular**, and **SQL Server**. Currently building for a mobile financial services provider: international remittance integrations, merchant onboarding, an internal operations ERP, and a widget-driven corporate platform. Previously hardened large-scale public-sector applications against injection, CSRF, and privilege-escalation risk, and designed multi-level approval workflows mirroring real organisational hierarchies. Independently ships full-stack products in **Next.js** and **TypeScript**, covering payments, point-of-sale, and financial reporting. Comfortable being handed an unfamiliar domain and owning it end to end.

EXPERIENCE

Software Engineer

Jan. 2026 – Present

Trust & Pay (TAP) – Mobile Financial Services

Shaheed Sarani, Dhaka, Bangladesh

- **Remittance Module Integration** | *ASP.NET Core, Angular*
 - * Integrated international remittance partners including **TapTap Send** and **MoneyGram** for inbound cross-border transfers.
 - * Consumed bank integration APIs for secure cross-border transaction processing.
 - * Implemented transaction status tracking and reconciliation flows against partner and bank responses.
 - * Built secure API consumption patterns with validation and error handling suited to financial operations.
- **TOMS – Internal Operations ERP** | *ASP.NET Core, Angular*
 - * Contributing to TAP's internal operations ERP supporting day-to-day business processes.
- **Merchant Portal** | *ASP.NET Core, Angular*
 - * Developed merchant onboarding covering registration, verification, and account provisioning.
 - * Built transaction monitoring and reporting features for merchant-side operations.
- **Admin Portal** | *ASP.NET Core, Angular*
 - * Extended the admin portal with role-based access control and operational dashboards.
 - * Designed validation logic and audit-friendly workflows for regulated financial operations.
- **Corporate Web Platform** | *Angular | tapbd.com*
 - * Rebuilt the public corporate website, migrating it off WordPress onto Angular.
 - * Designed a **widget-driven architecture** where administrators compose pages from reusable blocks — adding, reordering, and removing sections without a developer or a redeploy, replacing the CMS flexibility lost in the migration.
 - * Built the accompanying admin portal for managing page structure, widget configuration, and site content.
 - * Implemented reusable UI components and dynamic rendering logic driving every marketing page.

Junior Software Engineer

Mar. 2024 – Dec. 2025

Opus Technology Limited

Kakrail, Dhaka

- Delivered eight large-scale government and enterprise systems in ASP.NET Core and SQL Server, with an emphasis on security hardening, multi-role approval workflows, and operational reporting.
- **Online GD – Bangladesh Police** | *ASP.NET Core, SQL Server, jQuery*
 - * Built secure multi-step forms for Stolen Goods Tracking with validated state carried across steps.
 - * Prevented SQL injection and enforced CSRF validation across every mutating request.
 - * Encrypted GET parameters so record identifiers could not be tampered with or enumerated.
 - * Hardened authentication with OTP verification and API-level request validation.
- **Andoloner Chobi – Viral Evidence Platform** | *ASP.NET Core, SQL Server, jQuery*
 - * Developed scalable media upload using chunked buffering so large files survive interrupted connections.
 - * Added retry logic so a failed chunk resumes rather than restarting the whole transfer.
 - * Designed review dashboards gated by role-based access control, with secure file storage separated from publicly reachable paths.
- **Bangladesh Police Inventory Management** | *ASP.NET Core, SQL Server*
 - * Implemented multi-level approval workflows mirroring the organisation's authorisation hierarchy.
 - * Built bilingual (Bangla/English) vehicle search so records are findable in either language.
 - * Delivered role-based user management and proxy login allowing system analysts to act on behalf of a user when diagnosing issues.

- **DAK CC – Bangladesh Police** | *ASP.NET Core, SQL Server*
 - * Developed an officer dashboard as the single view of assigned duties.
 - * Implemented secure login using police ID combined with date of birth.
 - * Automated duty distribution logic balancing near and far assignments, removing the drift that manual allocation produced.
- **Police HQ Cafe Management System** | *ASP.NET Core, SQL Server*
 - * Built food ordering with partial and deferred payment settlement, tracking outstanding balances rather than closing every order at point of sale.
 - * Implemented delivery-charge logic applied by order type.
 - * Handled raw material logistics so stock draws down against sales, with monthly and consumption reporting.
- **Production Management – Lovello Ice Cream** | *ASP.NET Core, SQL Server*
 - * Developed worker profile management feeding directly into shift scheduling across production cycles.
 - * Built truck logistics coordination for outbound distribution.
 - * Implemented QR code generation for shipment labelling and downstream reporting.
- **ShetuAU – Social Media Platform (Australia)** | *ASP.NET Core, SQL Server, Angular*
 - * Developed backend APIs for user authentication, posts, comments, and administrative controls.
 - * Built the Angular frontend along with a separate admin panel for moderation.
 - * Implemented an advanced password policy and an advertisement placement system.
- **Education Management System (EMS)** | *ASP.NET Core, Entity Framework, SQL Server*
 - * Developed student master data management as the system's authoritative record.
 - * Implemented ID card generation driven directly from student records.
 - * Built role-separated admin and student dashboards with full CRUD over Entity Framework.

PERSONAL PROJECTS

Velora – E-Commerce Platform

| *Next.js, TypeScript, Prisma, Stripe, PostgreSQL*

- Built storefront, product catalog, cart, and checkout with **Stripe** payments and webhook-driven order state transitions.
- Implemented role separation across customer, moderator, and admin capabilities.
- Delivered admin dashboards with revenue analytics and sortable data tables over Prisma and PostgreSQL.

Servora – Restaurant Management Platform

| *Next.js, TypeScript, Prisma, PostgreSQL*

- Built a touch-optimised point of sale tracking orders through a pending, preparing, ready, and served lifecycle.
- Implemented payment handling with change calculation and receipt generation.
- Delivered real-time revenue dashboards, popular-item tracking, low-stock alerts, and a visual menu editor.

Expense Tracker – Personal Finance Dashboard

| *Next.js, TypeScript, Supabase*

- Built budgeting with category administration and per-category spend limits over Supabase auth and storage.
- Implemented CSV, Excel, and PDF report exports alongside CSV import for statement ingestion.
- Added gamified achievement tracking and interactive spend analytics.

Qalby – Ramadan Companion App

| *Next.js, TypeScript, Drizzle ORM, PostgreSQL*

- Built prayer tracking, Quran khatm progress, a categorised dua collection, and target-based dhikr counters.
- Implemented a drag-and-drop daily planner with intention setting and a reflection journal.
- Shipped full English and Bangla localisation over Drizzle ORM and serverless Postgres.

FragFrame – Portfolio Template for Video Editors

| *Next.js, React, TypeScript, CSS Modules*

- Designed a re-skinable architecture where identity, theming, and content live in data files and CSS tokens rather than components.
- Wrote a structural audit script checking headings, alt text, metadata, and link integrity against a running site.
- Built with zero runtime dependencies beyond the framework, covered by a Vitest unit and component suite.

TourTrail – Property Rental Platform

| *Next.js, TypeScript, Tailwind, MongoDB, NextAuth*

- Developed listing creation and booking flows covering photos, pricing, and availability windows.
- Implemented advanced multi-dimension filtering and authentication with JWT plus OAuth (Google, GitHub).

MedSync – Medication Management Platform

| *Next.js, TypeScript, MongoDB, NextAuth*

- Built medication routine scheduling with dose tracking, drug information lookup, and emergency service contact.

EDUCATION

United International University

Bachelor of Science in Computer Science and Engineering

Vatara, Dhaka

Jan. 2020 – Feb 2024

TECHNICAL SKILLS

Languages: C#, Python, TypeScript, JavaScript, SQL

Backend: ASP.NET Core, Entity Framework, REST API design, FastAPI, NextAuth

Frontend: Angular, Next.js, React, Tailwind CSS, CSS Modules, jQuery

Databases & ORMs: SQL Server, PostgreSQL, MongoDB, MySQL, Prisma, Drizzle ORM, Supabase

Payments & Integrations: Stripe, TapTap Send, MoneyGram, bank integration APIs

Practices: RBAC, Secure Authentication (JWT, OAuth, OTP), SQL Injection & CSRF Prevention, Reconciliation Flows, Audit-Friendly Workflow Design, Multi-Level Approvals, Localisation (Bangla/English), Vitest

Tooling: Git, Vercel, Node.js, Angular CLI
